Neil's Guitar Shop Owner's Manual

Congratulations!

Congratulations on your purchase of a Lionel Building! Perfect for any O gauge layout, this building features a lighted interior and sign.

Powering your building

To power the interior lighting, your building requires 12-18 volts (AC). Connect the two wires to your power supply, Lionel Lockon, or FasTrack Accessory Power Wire. To make the proper connections, the wires must be stripped back 1/8" to 1/4".

Caution! Only an adult should perform this task using a pair of wire strippers. Always use care when stripping wires.

1. As illustrated in Figure 1, connect one wire to the Power/A terminal on the transformer, the #1 terminal on the Lockon, or one of the FasTrack Accessory Power Wires.

Note! FasTrack users, we recommend that you use wire nuts (available at electronics supply stores) to make the Accessory Power Wire connections. Twist the bare ends of the wires together, then screw the wire nut over the connection.

2. Attach the remaining wire to the Common/Ground/U terminal on the transformer, the #2 Lockon terminal, or the remaining Accessory Power Wire.

Replacing the lamp

During the course of normal operations, the interior lamp may require replacement. Replacement lamps (Lionel part no. 640-9813-300) are available at your authorized Lionel Service Center or from Lionel Service in Chesterfield, MI.

To replace a lamp, turn the building upside-down, pull the lamp out of the socket, and install the replacement. Refer to Figure 2.

Note! The sign is illuminated by several small lamps. Only an authorized Lionel Service Center should service these lamps.

Roof antenna installation

So the guitar shop can stay in “tune” with all the current downlows and concert info you need to install the dish antenna on the roof. Snap the assembled antenna into the hole on the roof, turn it for the best reception and away you go dudes.
