FreightSounds Rolling Stock

Thank you for your purchase of this Lionel FreightSounds equipped car! These cars add realistic sounds to any train and will work on any power or command control system.

Operation

To use your sound car, simply place the car on the tracks, couple it into your train, power up the layout and start running.

The overall sound volume can be adjusted by using a small screwdriver in the volume switch located in the center of the underframe of the car (see diagram.) Sounds can be turned off completely using the SOUND / NO SOUND switch.

The MAX / MIN switch on the underside of the car is used to reduce the frequency of the random squeals, thumps and clickety-clack sounds. Use the MIN position to minimize these sounds.

Multiple cars can be placed throughout a train for more sounds. We recommend spacing your sound cars about 5 to 10 cars apart from the locomotive and each other for the best effects.
