

As with all LIONEL products your 'Bipolar' locomotive is built to last. However because of its unique design extra care should be taken when moving it to and from your track. 'Clips' have been provided to you for stabilizing the locomotive when moving it from your display shelf to your track or layout. These clips will help to minimize contact between the articulating cab sections to prevent accidental paint damage. Remember to hold and support the locomotive sections evenly when these clips are installed. Once on your layout remove the clips and operate as normal.

(CAUTION: DO NOT ATTEMPT TO OPERATE LOCOMOTIVE WITH CLIPS IN PLACE). Repeat the process any time you lift or remove your locomotive to or from your track area.

Please follow the instructions closely in order to protect your locomotive.

It is not recommended that you store your locomotive in its display or box with these clips installed. They are provided for use solely when removing or handling the locomotive.
