Two pantographs and 8 insulators are included with your set. Insert the snap-in end of the insulators into the pantograph holes as shown.

Snap the pantograph into position on the cab by pressing down on the sides after aligning the hole to the mounting stud.

**NOTE:** Do not press down on the pantograph center contact plate or you may damage the retaining clip.

For best radio reception (for Command Control operation), your pantographs are also antennae. For optimal reception, the pantographs must be installed. Check for overhead clearance before operating your set. For Command Control operation, use of a catenary (overhead power line) is not recommended.
